

A different type of Network

Dai Davies, General Manager, DANTE JGN 2 Symposium 18-20 January 2006, Sendai International Centre

GÉANT Topology

October 2004

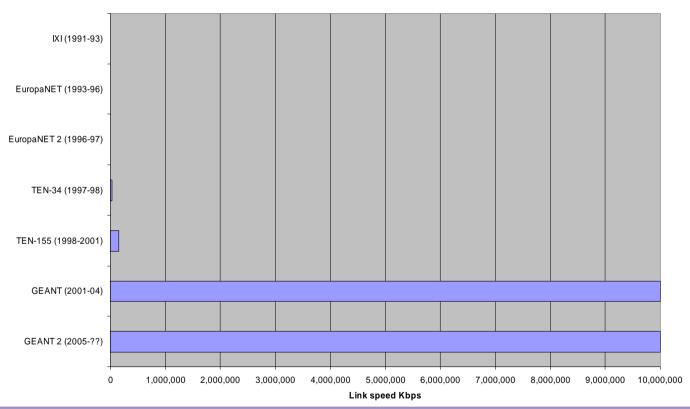

Pan-European Network History

Connect. Communicate. Collaborate

Pan European Network History

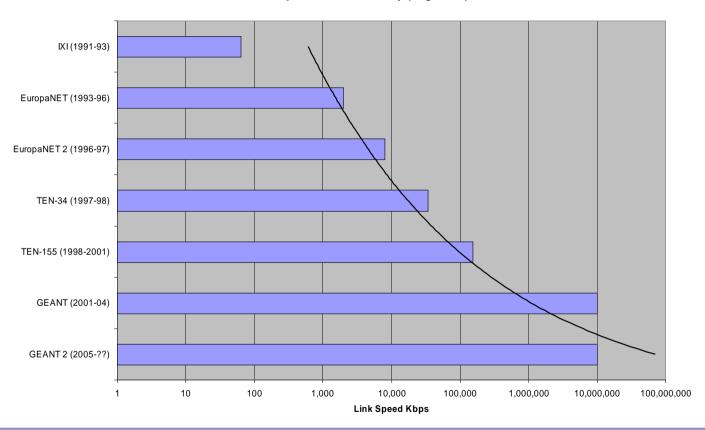

Pan-European Network History (Log scale)

Connect. Communicate. Collaborate

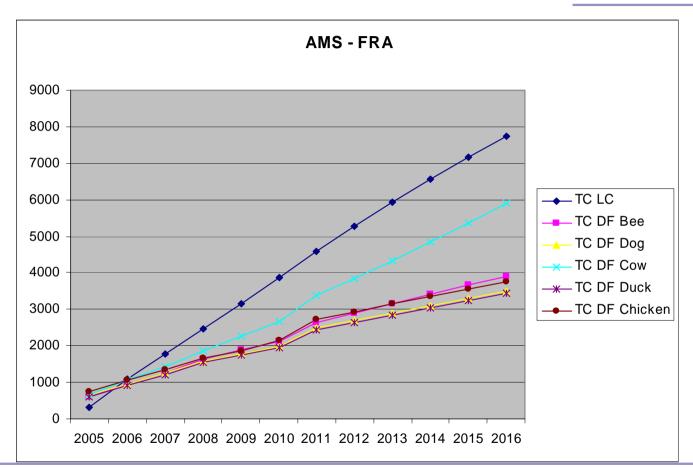

Pan-European Network History (Log Scale)

Hybrid Networks

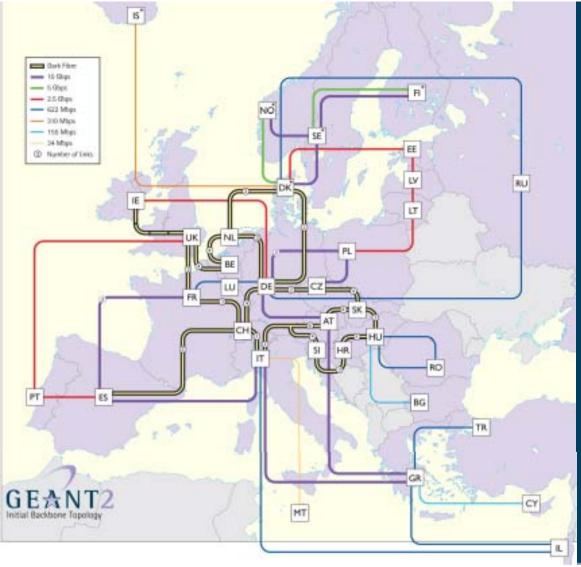

- Cost Effective
- Fits emerging traffic flows

BUT

- Control issue is a challenge
- Performance issue is a challenge

GÉANT2 Topology

GÉANT2 Focus

- Make large amounts of capacity accessible (technically, economically) to users
- Taking network services a step further:
 - Ethernet (GE and 10GE), as service and as access technology
 - Performance (monitoring and enhancement)
 - BW provision
 - Security
 - Mobility

The importance of Ethernet

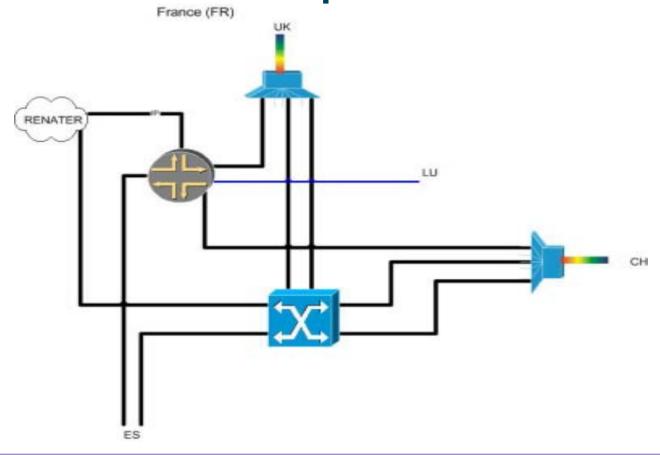

- As end to end service and access technology
- Its cheap and fast but how do we guarantee quality end to end across Europe?
- Challenge to GÉANT2, NRENs and equipment vendors

GÉANT2 PoP Example

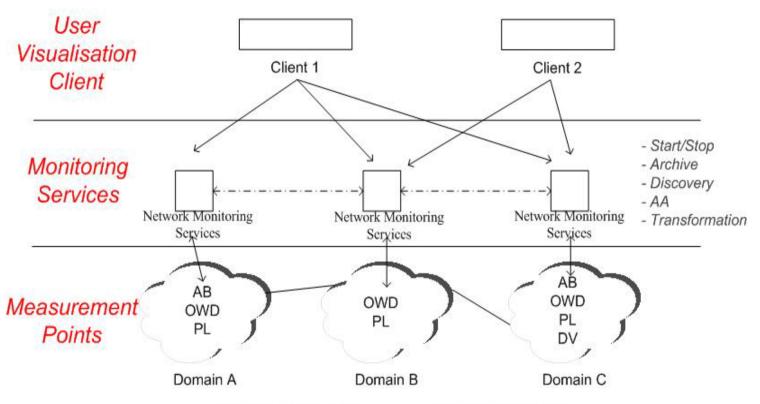

Development programme

- End to end QoS and Performance
- Security
- BW Provision
- Mobility

AB : Available Bandwidth PL : Packet Loss OWD : One-Way Delay DV: Delay Variation

Mobility

- AAA
- Roaming
- Single Sign On

Conclusions

- The investment in dark fibre is the enabler for access to and management of large amounts of capacity
- The mixed (routed + switched) network architecture is the enabler for service provision
- The development programme is focused on taking network services a step further
